

IDEATION PHASE

Define the Problem Statements

Date	29 June 2026	Maximum Marks	2 Marks
Team ID	XXX	Project Name	India's agriculture crop production analysis

Customer Problem Statement Template

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love. A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

Visual Framework (Mapped to Project Topic)

I AM
Who is the customer? Attributes & characteristics.

An Indian smallholder farmer or regional agricultural macro analyst.

I'M TRYING TO
What outcome or "job" do they care about?

Predict crop yields and optimize agricultural choices for the season.

BUT
What barriers/problems stand in the way?

Weather shifts and crop market prices are highly volatile and unpredictable.

BECAUSE
What is the root cause of the barrier?

Localized historical data analytics tools are completely inaccessible.

MAKES ME FEEL
How does it impact them emotionally?

Anxious about financial losses & overwhelmed by market uncertainty.

Problem Statement Matrix

ID	I AM (CUSTOMER)	I'M TRYING TO	BUT	BECAUSE	WHICH MAKES ME FEEL
PS-1	A smallholder farmer in India managing a rainfed farm with limited technical resources.	Select the highest-yielding and most profitable crop to plant for the upcoming farming season.	I struggle to make data-backed choices and often suffer heavy seasonal financial losses.	I lack access to localized historical crop production analysis, real-time soil health tracking, and predictive weather tools.	Anxious about my family's financial stability and uncertain about seasonal survival.
PS-2	An agricultural supply chain analyst for a regional Indian food distribution board.	Forecast national crop production trends to prevent market shortages and stabilize food pricing.	I cannot accurately map out regional crop yields or predict supply deficits across different states in real-time.	Crop production data is highly fragmented, outdated, and lacks centralized predictive analysis capabilities.	Overwhelmed by erratic price fluctuations and stressed by the risk of sudden food insecurity.
