

Problem-Solution Fit Template

Date: 30 June 2026Team ID: xxxxMaximum Marks: 2 Marks

Project Name: India's agricultural crop production analysis

1. CUSTOMER SEGMENT(S)	6. CUSTOMER CONSTRAINTS	5. AVAILABLE SOLUTIONS
Indian small-scale farmers, agricultural policymakers, and crop researchers needing data-driven insights.	Climate change unpredictability, erratic monsoons, soil degradation, and lack of access to real-time market data or digital tools.	Traditional government portals, localized agricultural advice, and basic manual irrigation planning.
2. JOBS-TO-BE-DONE / PROBLEMS	9. PROBLEM ROOT CAUSE	7. BEHAVIOUR
Need to maximize crop yields, forecast weather impacts, and optimize fertilizer/water usage for different soil types.	Over-reliance on rainfed agriculture, fragmentation of land holdings, and lack of technology-driven decision support systems.	Reliance on traditional farming calendars, word-of-mouth advice, and seasonal habits rather than data analytics.
3. TRIGGERS	10. YOUR SOLUTION	8. CHANNELS of BEHAVIOUR
Crop failure, monsoon delays, sudden market price drops, or pest outbreaks.	An AI-driven crop forecasting and soil health monitoring dashboard to provide actionable insights for farmers.	Integration via farmer mobile apps, local cooperative extension centers, and government agricultural kiosks.
4. EMOTIONS: BEFORE / AFTER		
Before: Anxious, uncertain, and frustrated by low yield and volatile income. After: Confident, empowered, and secure with data-backed planning.
