

Date	30 June 2026
Team ID	XXXX
Project Name	India's agricultural crop production analysis
Maximum Marks	4 Marks

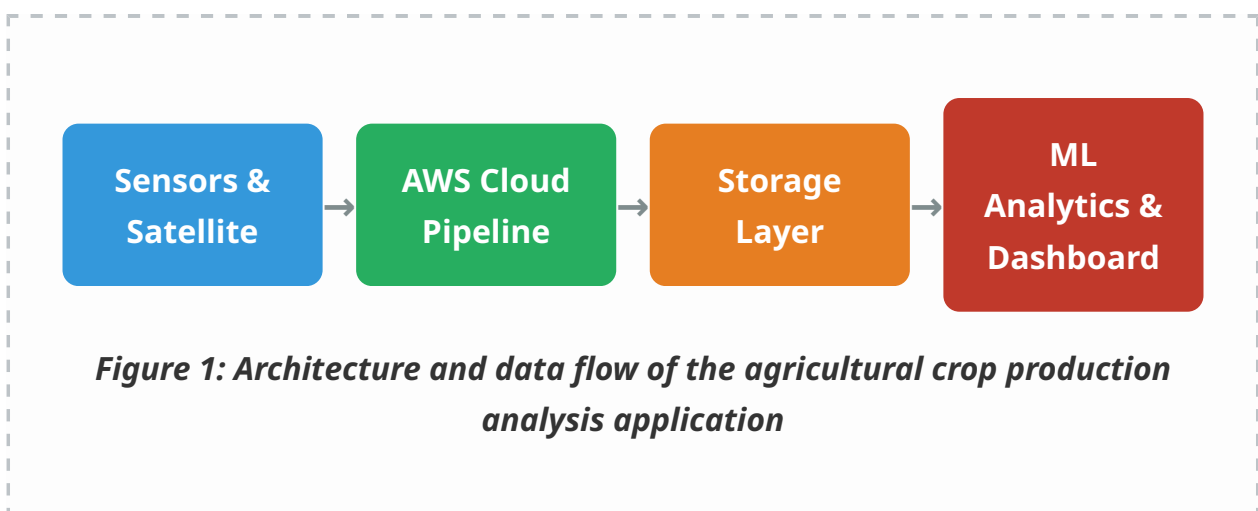

Project Design Phase

Solution Architecture

Solution architecture bridges the gap between complex agricultural data and effective technology solutions. Its goals are to:

- **Find the best technical solution** to solve existing agricultural productivity issues.
- **Describe the structure, data characteristics, behavior, and storage aspects** of the system to stakeholders.
- **Define data collection features**, processing phases, and analysis requirements.
- **Provide technical specifications** for defining, managing, and delivering the agricultural analysis platform.

Example - Solution Architecture Diagram:
