

Project Development Sprint

Project Name: India's Agricultural Crop Production Analysis

Topic ID: xxxx

Start Date: 1 July 2026

7-Day Execution Plan

Day	Phase	Focus
Day 1	Scope & Sourcing	Finalize dataset selection and establish baseline metrics.
Day 2	Data Wrangling	Cleaning, handling nulls, and standardizing data formats.
Day 3	EDA	Initial statistical analysis and outlier detection.
Day 4	Modeling	Correlation analysis and preliminary forecasting.
Day 5	Visualization	Creating key charts: Heatmaps, Bar charts, and Time-series plots.
Day 6	Drafting	Writing the methodology and synthesizing results.
Day 7	Review	Final formatting, proofreading, and export preparation.

Pro-Tips for Execution

- **80/20 Rule:** Focus heavily on cleaning and visualization; advanced modeling is secondary.
- **Data Integrity:** Use reliable government sources (data.gov.in) to ensure credibility.
- **Contextual Nuance:** Explicitly categorize findings by seasonal agricultural cycles (Kharif, Rabi, Zaid).

Suggested Report Structure

1. **Title Page:** Project Details and Metadata.
2. **Introduction:** Significance of agricultural analysis in the Indian context.
3. **Methodology:** Data sources and processing steps.
4. **Results:** Analysis of key trends supported by 3-4 primary visualizations.
5. **Conclusion:** Interpretation of findings and actionable insights.
